

A letter from the Founders . . .

We sincerely believe the quality, price, delivery, and the relationships we have cultivated with a worldwide customer base will lead us to further success. PCB International was established as a manufacturer of Printed Circuit Boards, specializing in singled sided, double sided and multi-layers. In compliance with exigencies of patron demand, we have developed and continue to sharpen our aptitude in a host of novel capabilities including Class 3, flexible circuits, and carbon printing.

With a strong devotion to detail and the urge to master the intricacies of the industry, we look towards implementing even more advanced techniques and further expanding our complement of equipment in order to maintain our leadership in meeting the most stringent time and quality requirements. Through modern day communication systems and optimizing the internet as a platform, our stations provide prompt and quality sampling services.

In this 21st century, PCB International welcomes the challenge of the coming era. Moreover, to you – our customer's, we pledge our unyielding commitment to sustain our trademark of quality as we search for even more practical and efficient methods of service in this increasingly globalized economy. We believe that quality, price, on-time delivery, and the development of relationships are time honored standards. Furthermore, we deem our core products - along with the value added services in which we continue to render - will guide both *you* and *us* to future success.

Yours Truly,

Aimee Elizabeth Hwang
Vice President
Co-Founder
